

Visual Settings **Jedi Fallen Order** for PC

Video

Window Mode

Select to choose your display mode. This option may include Fullscreen, Windowed, and Windowed Fullscreen. However, options vary depending on PC's hardware.

Max FPS

Select to adjust how smoothly the game runs on your PC. This option may include 30, 45, 60, 90, 120, or 144 frames per second (fps).

VSync

Turn ON/OFF to synchronize the frame rate of the game with the monitor refresh rate for more stability.

Dynamic Resolution Scaling

Select to change the graphics preset. Select custom for individual settings. This includes Medium, High, Epic, and Custom. Choosing Custom allows you to change other graphic settings individually.

View Distance

Select to change the maximum distance of objects in a scene. This option includes Medium, High, and Epic.

Shadow Quality

Select to set the quality of shadows. This option includes Medium, High, and Epic.

Anti-Aliasing

Select to set the quality of post processing. This option includes Medium, High, and Epic.

Texture Quality

Select to change the quality of textures. This option includes Medium, High, and Epic.

Visual Effects

Select to change the quality of visual effects. This option includes Medium, High, and Epic.

Post Processing
